

## Become a Botanist

A Botanist is someone who studies plants. By tracking the growth of your seeds, you can build some of the same skills that Botanists use every day.

---

**Every couple of days, take some time to visit your plant.** You can answer some or all of the prompts below just by thinking about them, or by recording your observations in a journal or on a piece of paper.

### Plant Growth Observations & Questions:

- How many days did your seed(s) take to *germinate* (start growing)? The first sign of germination is the appearance of roots!
  
- How much has it grown since the last time you checked on it?
  
- Do you see roots? A stem? Leaves?
  
- What does your plant look like every time you check in on it? You can make an observational drawing, labeling the different plant parts.
  
  
  
  
  
  
  
  
  
  
- If you are sprouting more than one variety of seed, which type grew fastest?

# Become a Botanist

A Botanist is someone who studies plants. By tracking the growth of your seeds, you can build some of the same skills that Botanists use every day.

Below is a chart that you can use to measure the height of your plant each time you observe it:
